Tensure
Software Engineer

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer role at Tensure. With over a decade of experience in data analysis and as a scrum master at Bloomberg LP, combined with my transition into full-stack development through the rigorous Actualize program, I bring a diverse and adaptable skill set to the table.

Throughout my journey in software development, I have built and deployed several full-stack applications, such as a gym app and a job application tracking tool built using Node.js, MongoDB, and React.js. The latter, in particular, has been instrumental in expanding my expertise with backend development and practical project management. I have incorporated advanced features like document attachments and note-taking functionality, further enhancing my problem-solving and technical skills.

Currently, as a Quality Assurance Software Engineer with Remotasks, I apply my software expertise in Python and JavaScript to evaluate and improve AI-based code prompts. This experience has refined my attention to detail and technical precision, both essential for backend development.

At Bloomberg, I managed cross-functional teams, acted as a scrum master, and collaborated with engineers to optimize workflows and deliver results. My tenure allowed me to hone both my technical and teamwork abilities, which I look forward to applying at Tensure.

I am excited about the opportunity to contribute my skills and background to your team. I would welcome the chance to discuss how I can help drive Tensure's success.

Thank you for considering my application. Please feel free to reach out via phone or email at your convenience.

Sincerely,
Thomas Gagliano
