Full Stack Software Engineer

Higharc

Dear Hiring Manager,

I am reaching out to express my interest in the Full Stack Software Engineer role at Higharc. With a decade of experience as a data analyst and scrum master at Bloomberg LP, I transitioned to full-stack development after completing a rigorous four-month Actualize Bootcamp in 2023.

Throughout the bootcamp, I honed my skills with a tech stack that included Ruby on Rails for backend development and React.js, HTML, and CSS for frontend development. For my final project, I successfully built a gym app, navigating and overcoming numerous challenges to ensure a seamless application.

My extensive tenure at Bloomberg LP not only equipped me with technical expertise but also enhanced my teamwork skills. Serving as both the scrum master for the engineering team and an analyst, I facilitated collaboration and utilized Jira for effective task tracking. This experience allowed me to thrive in diverse stakeholder environments, honing my ability to work effectively with individuals from various backgrounds and roles.

In addition to my technical and teamwork skills, I bring a strong aptitude for critical thinking and a determination to solve complex problems. I firmly believe in approaching challenges from multiple angles and persisting until a solution is reached.

Thank you for considering my application. I am genuinely enthusiastic about the prospect of contributing my skills and expertise to the Higharc team. If you require additional information or wish to discuss my candidacy further, please feel free to contact me via email or phone.

Sincerely,

Thomas Gagliano
