Coalition

Dear Hiring Manager,

I am writing to express my strong interest in the Backend Software Engineer position on the Cyber Policies team at Coalition. With my background in full stack development, hands-on experience in API development, and passion for working on scalable, high-impact platforms, I am excited about the opportunity to contribute to Coalition's mission to combat digital risk through engineering innovation.

My experience building backend services in Python, along with my understanding of cloud-native development, makes me confident in my ability to excel in this role. I have worked extensively on building RESTful APIs and backend applications that prioritize both efficiency and security. In my previous projects, I have collaborated with cross-functional teams to break down complex requirements into actionable development plans, delivering services that are scalable and performant. My knowledge of container-based deployment using Docker and source control through Git also aligns well with Coalition's technical stack.

Moreover, my recent experience working on distributed applications gives me a solid foundation for contributing to the ongoing development of your cyber policy platform. I am particularly drawn to Coalition's forward-thinking approach to security and system design, and I am eager to bring my problem-solving skills, collaborative mindset, and dedication to engineering excellence to your team.

I am impressed by Coalition's commitment to building an inclusive and mission-driven team, and I look forward to being part of a company that combines technical innovation with a strong sense of purpose. I am confident that my experience, combined with my passion for learning and growing in dynamic environments, will allow me to make meaningful contributions to your engineering team.

Thank you for considering my application. I look forward to the opportunity to discuss how I can help further Coalition's mission to address digital risk.

Sincerely,
Thomas Gagliano II
